

**For Immediate Release**

**Provis Graphic, a leading wholesale manufacturer of illuminated signage, converts its 3D-printing capacity to support front-line professionals fighting the COVID-19 war**

**MINNEAPOLIS, Minnesota (March 24, 2020)** *Provis Graphic™, a leading wholesale manufacturer of precision LED-illuminated signage, converts its 3D printing capacity -- normally used to produce illuminated signage -- to produce face shields to protect frontline healthcare and law enforcement professionals fighting the war against COVID-19.*

“Protecting our employees, communities, law enforcement professionals, and healthcare workers on the front line in the battle against COVID-19 is our first and foremost priority. Period. The continued good health of our communities, and the continuity of our business operations would not be possible without them,” said Sasa Smajlovic, founder, Chairman and CEO of the Provis Group of Companies.

Kenan Hanhan, founding partner and President of Provis Graphic LLC, the Minneapolis-based US branch office of Provis Graphic adds, “In the USA, we respectfully ask the White House Administration to coordinate sourcing and purchasing of critical PPE and ventilators to avoid price surges and allocate supply where it is needed the most, by not allowing States to compete against one another.” Hanhan adds, “we also recommend immediate implementation of the Federal Defense Production Act.”

The allocation of Provis Graphic protective shields is currently focused on the immediate Region surrounding Sarajevo, Bosnia-Herzegovina, where Provis Graphic production is based. Once local needs are satisfied, Provis Graphic will make its face shields immediately available for export to communities in need in the USA. Additionally, Provis Graphic will make its face shield production files available free-of-charge for anyone in the USA who has 3D printing capacity to join the battle against COVID-19.

## **About Provis Graphic**

Founded in 1994, Provis Graphic™ is a leading European wholesale manufacturer of custom, low-profile, trim-less precision-illuminated signage to stretch the possibilities of design. From two inch high precision-illuminated cast block signage for retail display, to 20 foot high rise lettering, Provis Graphic offers the broadest range of precision-illuminated lettering solutions on behalf of its visual communications design, fabrication and installation partners in 26 countries. Provis Graphic global headquarters and manufacturing operations are based in Sarajevo, Bosnia-Herzegovina, with branch offices in Slovenia, and Minneapolis, USA.
